

Global Income Strategy

Portfolio and Economic Commentary – 2nd Quarter 2019

GLOBAL INCOME STRATEGY COMMENTARY

Our investment philosophy is predicated on a time-tested, three pronged approach providing solid risk adjusted returns to our investors for over two decades.

- We believe in the importance of getting paid immediately for the risks which are taken and focus on businesses which compensate our clients with **dividends and above average interest**. We believe this income stream, coupled with capital appreciation, is a vital aspect of total return.

- We dig deep for **value** often viewing crisis as an opportunity. We believe that fundamental research and patience are critical to long term success and that over time, the price of a company will rise to reflect the value of the underlying firm viewing each purchase as if were buying a piece of a business – not simply a stock certificate.
- We believe that **global revenue generation** is a key component to growth and sustainability and invest in companies with global growth opportunities. We are unafraid to take contrarian positions, but remain diligent about the risks of a global economy.

PERFORMANCE COMMENTARY

The Global Income strategy has posted a strong gain of 10.45% for the year versus a gain of 13.00% for the blended balanced benchmark. The annualized trailing returns for the strategy since our inception on January 1, 2003 are 6.98% versus 7.58% for the blended benchmark and 6.39% for Morningstar’s US Fund Allocation – 50% to 70% Equity. The twelve month trailing yield for the Global Income strategy stands at 4.96% versus 1.71% for the Vanguard Balanced index fund (VBINX).

We remain underweight to a traditional 60% stock/40% bond portfolio due to the risks which remain and valuation metrics. That said, our portfolio maintains a reasonable 13.14 P/E (TTM) which is significantly lower than the broader market indices – most of which currently maintain multiples in excess of 20 times trailing earnings. Our focus continues to emphasize the importance of immediate income to our investors particularly in this volatile, low interest rate environment, which we believe will persist for longer than most economists. In the fixed income sector, our emphasis remains on high yield bonds, which we believe more adequately compensates our investors for credit risk, while providing better protection in a potentially rising interest rate environment. The following is an analysis of the independent strategies which comprise our flagship Global Income strategy in percentages indicated above.

Sector Allocation

Top Five Equity Holdings **Weight**

Starbucks	1.38%
Qualcomm	1.23%
Norfolk Southern	1.20%
Merck & Co.	1.19%
Kimberly-Clark	1.18%

Top Five Fixed Income Holdings **Weight**

Tempur Sealy International 5.625%	0.61%
Oppenheimer Holdings 6.750%	0.60%
Treehouse Foods 4.875%	0.60%
CenturyLink 6.750%	0.60%
Quad/Graphics 7.000%	0.58%

DISCIPLINED ALPHA DIVIDEND STRATEGY COMMENTARY

As value investors, we constantly focus on our duty to protect the principal of our investments even as we look for ways to grow them over time as well. As economists, we remain alert to trends taking place in the larger global economy. As analysts, we seek to invest in securities priced with a margin of safety in order to account for their near term volatility and our uncertainty about what the future holds. With this in mind, we look for opportunities in three specific categories: classic value, persistent earners, and distressed or contrarian.

Classic value stocks sell at attractive valuations and provide above-average dividend yields and growth. Persistent earners are companies which have steady and predictable earnings and that are selling below their historic valuation. The distressed/contrarian category refers to stocks that are out of favor due to what we perceive to be temporary factors and are likely to appreciate substantially as the temporarily distressing factor recedes. Typically the distressed category is the smallest in the portfolio.

PERFORMANCE COMMENTARY

The Disciplined Alpha Dividend strategy has returned 16.13% year-to-date, outpacing the Russell 3000 Value and Dow Jones US Select Dividend indices, which returned 16.05% and 13.64%, respectively. The strategy has produced alpha and sound risk adjusted returns besting the Russell 3000 Value index and its large value peer group for the past 1-year, 3-year, 5-year, 10-year, 15-year, and since inception periods. The trailing annualized ten year returns were 14.08% for the strategy and 13.14% for the Russell 3000 Value index. Since inception on January 1, 2003, the strategy has returned 9.28% versus 9.11% for the Russell 3000 Value index and 9.56% for the Dow Jones US Select Dividend index.

Our sector allocation weighting and security selection both enabled active return contributing to absolute and relative performance for the year against the Russell 3000 Value index. The consumer cyclical, financial services and technology sectors were our largest contributors to active return, while the basic materials, energy and healthcare sectors had the least contribution on performance. The top performers for the quarter were Qualcomm (34.5%), Ford Motor (18.4%), MetLife (17.8%), Principal Financial (16.5%) and Starbucks (13.3%). The bottom performers for the quarter were Pitney Bowes (-34.8%), Altria Group (-16.3%), B&G Foods (-13.2%), Intel Corp (-10.2%) and Philip Morris (-9.9%).

Sector Allocation (Morningstar)

Qualcomm	4.22%
Norfolk Southern	4.11%
Merck & Co.	4.09%
Kimberly-Clark	4.07%
Procter & Gamble	4.06%
Cisco Systems	4.00%
PepsiCo	3.87%
Principal Financial Group	3.86%
Apple	3.78%

DISCIPLINED ALPHA DIVIDEND STRATEGY COMMENTARY

As one may recognize from the below chart, our firm has consistently provided a steady stream of income to our clients in the form of dividends. It is our assertion that this income stream has not only reduced the risk of our portfolio, but also provided a large part of the total return thereby leading to our performance success over this past tumultuous decade plus.

We believe that dividends allow our investors to “get paid to wait” while patiently working through volatile business and market cycles. This strategy provides emotional support during difficult cycles and enables investors to weather turbulent periods by utilizing dividend income for personal needs or to reinvest cash at lower valuations. Our strategy is not only grounded in psychological and behavioral finance concepts, but is also supported by empirical evidence outperforming in both negative and full market cycles.

Dividends also act to align the interests of corporations and shareholders in helping to eliminate the agency effect. Corporate boards have recognized the value of dividends in stabilizing their stock prices and encouraging investment during both high and lower tax regimes. In supporting and increasing dividends over time, managers are compelled to maintain a reliable stream of cash flows to shareholders rather than waste capital on those expenses adding little to corporate revenue including executive perks, pet projects, and ill-timed, unwise acquisitions. It appears a paradox; however, our experience and academic studies have displayed that sufficient investment for a good business can still occur in conjunction with dividends as managers are forced to invest cash flow more prudently and only in those capital investments in which they have the highest conviction in adding to corporate revenue, particularly since stock buybacks are often ill-timed.

ALTRIOUS: A STORY OF CONSISTENT DIVIDENDS OVER THE YEARS

The strategy has consistently delivered an above average dividend yield versus the S&P 500 since its inception.

INTERNATIONAL ADR DIVIDEND INCOME STRATEGY COMMENTARY

As value investors, we constantly focus on our duty to protect the principal of our investments even as we look for ways to grow them over time as well. As economists, we remain alert to trends taking place in the larger global economy. As analysts, we seek to invest in securities priced with a margin of safety in order to account for their near term volatility and our uncertainty about what the future holds. With this in mind, we look for opportunities in three specific categories: classic value, persistent earners, and distressed or contrarian.

Classic value stocks sell at attractive valuations and provide above-average dividend yields and growth. Persistent earners are companies which have steady and predictable earnings and that are selling below their historic valuation. The distressed/contrarian category refers to stocks that are out of favor due to what we perceive to be temporary factors and are likely to appreciate substantially as the temporarily distressing factor recedes. Typically the distressed category is the smallest in the portfolio.

PERFORMANCE COMMENTARY

The International ADR Dividend Income strategy has returned 10.82% for the year. The MSCI EAFE Value index is higher by 9.58% while the S&P Int'l Dividend Opportunities index has risen 15.71%. Since its inception on June 1, 2010, the strategy has produced annualized returns of 5.12% versus 4.93% for the S&P Int'l Dividend Opportunities and 5.47% for the MSCI EAFE Value indices, respectively. Since its inception, the strategy has produced alpha against the MSCI EAFE Value index due to its lower beta.

Our sector allocations and stock selection have had a positive impact on active return versus the MSCI EAFE Value index during the year. The consumer defensive, financial services and healthcare sectors have attributed the greatest portion to relative outperformance while communication services, utilities, and technology were the largest detractors to active return. Going forward, we believe we will find more value amongst international issues than U.S. companies while expecting the financial services, energy and basic materials sectors to be continued benefactors of global economic stabilization. The top performers for the quarter were Alcon (18.1%), Rio Tinto (13.9%), Danone (12.4%), Allianz (12.1%) and Bayer (12.0%) while the bottom performers were Sasol (-19.9%), British American Tobacco (-14.9%), Vodafone (-10.3%), Equinor (-9.1%) and Lloyds Banking Group (-8.0%).

UNCONSTRAINED FIXED INCOME STRATEGY COMMENTARY

Based on our macroeconomic outlook over a three to five year period and our cyclical views from quarter to quarter, we employ top-down strategies that focus on yield curve positioning, volatility, and sector rotation. We then utilize bottom-up analysis to drive our security selection process and facilitate the identification of undervalued securities with the potential for above average income. We invest in securities that operate across diversified sectors in the fixed income markets of the United States, primarily those in U.S. dollar denominated high yield and investment grade bonds,

including government securities, corporate bonds, and mortgage- and asset-backed. Sources of added value:

Credit Analysis - We emphasize independent analysis and do not rely on credit agencies.

Duration Risk - We avoid long, extreme duration shifts generally operating within a moderate duration range typically between two and four years.

High Income - Our research attempts to identify issues paying above average income.

Risk Premium Management - We seek to attain an attractive yield/spread in relation to a five-year treasury within acceptable levels of portfolio risk.

PERFORMANCE COMMENTARY

In its June meeting the Federal Reserve left rates unchanged keeping its benchmark interest rate within a target range of 2.25% to 2.50%. Despite inflation remaining near the FOMC's 2.0% target level and citing sustained expansionary economic activity and strong labor market conditions, the Fed expressed an increasing level of uncertainty on the continuing strength and stability of the US economy signaling the growing likelihood of instituting a rate cut in the coming months. The yield curve, which began the quarter modestly inverted, increased its inversion on the short end with the 10-year note contracting approximately 40 bps over the quarter to a level of just 2.0%, 12 bps lower than 3-month T-bills. Investment grade corporate bonds performed the best in the broad based US fixed income market during the quarter returning 4.5% followed by Treasuries and Agencies which each generated returns of approximately 3.0%.

The Unconstrained Fixed Income strategy returned 1.28%, gross of fees, in the second quarter of 2019 lagging the Barclays US Aggregate Bond and ICE BofAML US High Yield indices by 180 bps and 188 bps respectively. Year-to-date the Unconstrained Fixed Income strategy is up 6.66%, gross of fees, outpacing the Barclays US Aggregate Bond index by 55 bps, while continuing to trail the greater high yield corporate bond market with the ICE BofAML US High Yield index up 10.16% through the first two quarters of 2019.
